## On the main page, we have various buttons for interaction, including:

- Additional Information: Displays various information about dental health.
- Mute: To mute or activate the background music.
- Language Switch: Allows English-speaking users to use the tool.
- Manual: The usage manual explains how to use the simulator.

We can access two types of simulations: one focused on adult dental morphology and the other on pediatric morphology.

In the adult morphology simulation, we see an adult patient ready for their medical check-up:

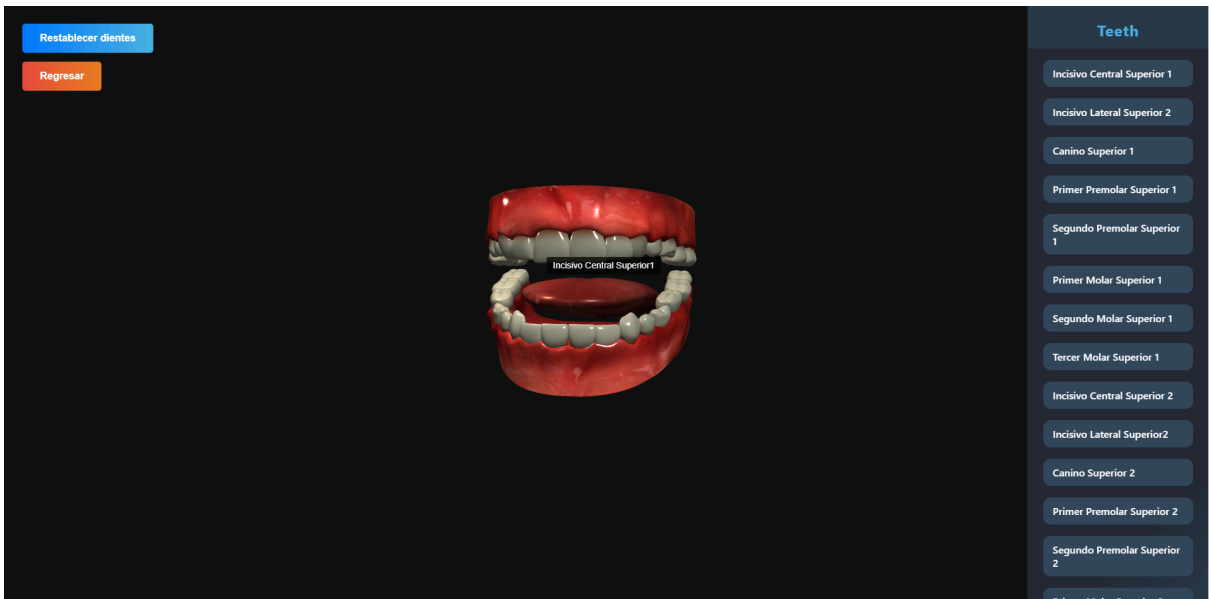

We are greeted by Doctor Mauricio, who gives a brief explanation of what we will see in the simulator.

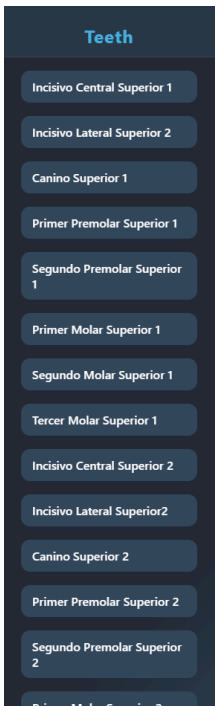

Some of the functionalities include:
- Mouse: Rotate and zoom the camera.
- WASD: Move the camera.
- Enter: Continue the conversation with the doctor.
- Left Click: Interact with the patient to view their dentition.
- Mute: Mute the background sound of the clinic.

When interacting with the adult patient, we can observe a set of teeth with adult morphology. We can use our mouse to rotate the realistic model and left-click to take a closer look at each tooth.

**There is a table with all existing teeth to make searching easier.**

You can reset all examined teeth using a button.
The return button allows you to go back to the main page.

In the pediatric morphology simulation, we see a young patient ready for their medical check-up.

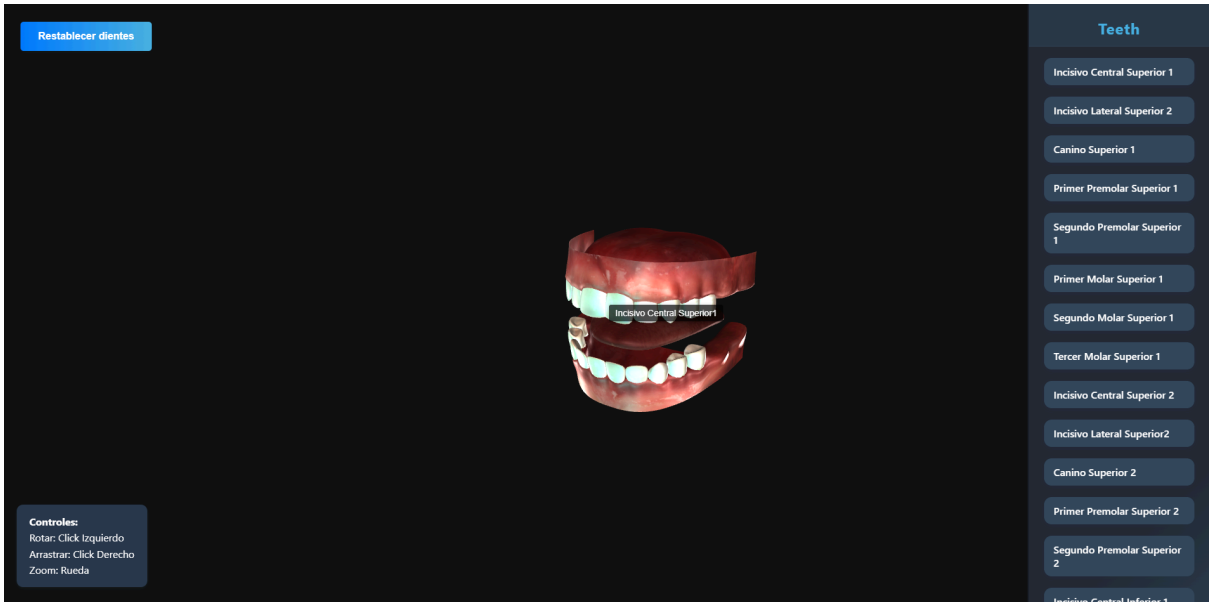

Again, Doctor Mauricio greets us with a brief explanation of what we will see in the simulator.

Some of the functionalities include:
- Mouse: Rotate and zoom the camera.
- WASD: Move the camera.
- Enter: Continue the conversation with the doctor.
- Left Click: Interact with the patient to view their dentition.
- Mute: Mute the background sound of the clinic.

When interacting with the young patient, we can observe a set of teeth with pediatric morphology. We can use the mouse to rotate the realistic model and left-click to examine the teeth more closely.

There is a table with all existing teeth to make searching easier.

Additional Mouse Functionalities:

Controles:
Rotar: Click Izquierdo
Arrastrar: Click Derecho
Zoom: Rueda

Restablecer dientes

- Left Click: Rotate the model in any direction.
- Right Click: Dynamically drag the model.
- Scroll Wheel: Zoom in and out.
- Reset: Reset each of the examined teeth.
